Ultrasonic manifestations of huge broad ligament with huge ovarian teratoma: a case report

巨大阔韧带肌瘤伴巨大卵巢畸胎瘤超声表现 1 例

曹小容

[中图法分类号] R445.1

[文献标识码] B

患者女, 45 岁, 因“间断性尿频半年加重伴右侧腰部不适 1 d”就诊。超声检查: 盆腹腔见一大约 19.0 cm×15.8 cm×9.7 cm 巨大实性包块, 左侧卵巢大小形态正常, 右侧卵巢未满意探及。右侧输尿管上段扩张伴右肾积水(图 1, 2); CDFI 可探及包块内少许条状血流信号(图 3)。超声提示: 浆膜下子宫肌瘤可能性大。MRI 检查: 子宫右侧壁巨大肿块影, 大小约 23 cm×13 cm×8 cm, 与子宫浆膜层分界不清, 右后方见一大约 10 cm×5 cm×6 cm 类圆形混杂信号。MRI 提示: ①子宫肌瘤(浆膜下)可能性大;

②考虑畸胎瘤。入院后 2 d 行剖腹探查术, 术中见右侧阔韧带内见一大约 25 cm×15 cm×10 cm 巨大包块, 其基底与子宫峡部由一蒂相连, 子宫被包块挤向左侧盆腔。右侧输尿管变形, 沿包块外侧阔韧带基底行走再向内而进入膀胱。右侧卵巢增大, 约 8 cm×5 cm×5 cm。行右侧输尿管镜下输尿管支架植入术、右侧阔韧带肌瘤摘除术、右侧附件切除术及子宫次全切除术, 术后剖开包块内见灰白色水肿的肌性组织, 螺旋状结构分界不清。
